

PRESS RELEASE

Tyler Gabel becomes a Certified Loss Control Professional

Pine Bluffs, Wyoming (August 2026): High West Energy Safety and LP Director Tyler Gabel has earned the Certified Loss Control Professional (CLCP) designation after completing an intensive program in electric utility safety and loss control. The Certified Loss Control Program is a series of workshops offered by the National Rural Electric Cooperative Association in conjunction with the National Utility Training & Safety Education Association. The program is designed to instruct participants in many areas related to electric utility industry safety.

According to the Occupational Safety and Health Administration, nearly 4 million injuries occur annually in the workplace. Certified Loss Control Professionals work to promote safe working conditions for utility employees and the public while helping utilities reduce workplace incidents, improve operational efficiency, and strengthen safety culture.

Tyler Gabel is among a select group of electric utility professionals nationwide to earn this certification in 2026. The program requires participants to complete a rigorous series of seminars and tests, a 30-hour OSHA course, and a detailed final course project.

Loss Control participants go through four, week-long sessions that are designed to challenge and educate participants in new, innovative safety techniques. Participants must also maintain their certificate by attending courses every year in order to stay on top of changes in the industry.

Gabel has been with High West Energy for 17 years and currently serves as Safety and LP Director. He resides in Pine Bluffs with his family.
